

Fedor Lipskerov

Molecular Biologist | Biotech Analyst

Molecular biologist with 10 years of experience in protein engineering and translational research. Ph.D. from Nobel Prize winner Prof. Ciechanover's lab at Technion.

Education

MS & BS
Fundamental Chemistry
/Biochemistry
PhD
Molecular Biology

Core Skills

- Molecular Biology**
Assay Design, Protein Engineering, Genomics(RNA seq, bioinformatics)
- Leadership**
Team building, Remote coordination, Multidisciplinary teamwork
- Product/Innovation**
Product design, Rapid prototyping, Strategy
- Communication**
Pitching, Blogging, Public speaking, Cross-Disciplinary Communication
- Clinical Research Literacy:**
ACRP: GCP-compliant, Decentralized trial models, Quality management systems, Protocol development/feasibility

ORCID ID
Google Scholar

Academic Experience

- 2022-2025**
Technion University
PhD
 - Studied proteasome regulation to uncover mechanisms of protein quality control in disease.
 - Generated and characterized domain-specific p62 mutants to analyze structure-function effects on proteasome recruitment and aggregate dynamics.
 - Applied confocal imaging and biochemical assays to quantify proteasome activity in aging.
- 2016 - 2022**
Institute of General Genetics named after N.N. I. Vavilov
Research Scientist
 - Protocol development and operation of automated robotic arm for high-throughput analysis
 - Developed anti-HER2 bispecific antibodies
 - Characterized novel antibody binding using Surface Plasmon Resonance
 - Engineered and optimized plant-based production of bispecific antibodies for improved yield
 - Managed multiple model systems including mice and viruses

Innovation Experience

- 2024/2025**
BioMed X Boot Camp, Servier/Daiichi Sankyo
Postdoc Candidate

Servier: Contributed to a team at BioMed X Boot Camp focused on autoimmunity, helping develop innovative diagnostic methods that led our team leader to win the first place on Bootcamp.

Daiichi Sankyo: Contributed to development of novel peptide-based bispecific biologics platform for targeting solid tumors that led our team leader to win the first place on Bootcamp.
- 2023-2025**
Synaptiflora
Founder of student Microbiome Startup
 - Managed and mentored a cross-functional R&D team of 5 scientists to deliver project milestones.
 - Led investor outreach and business model development, translating scientific strategy into value propositions and funding materials.
- 2023**
AION Labs Bootcamp
Co-founder Candidate

I contributed to developing the theory behind AI models for predicting druggable protein pockets and identifying E3-molecular glue pairs for targeted protein degradation.
- 2021-2022**
EFKO Group
Startup Analyst
 - Screened and evaluated early-stage biotech and foodtech startups for potential investment/acquisition.
 - Conducted scientific, market, and IP due diligence using databases (PitchBook, Derwent, Mintel, Web of Science).
 - Built competitive landscape and valuation models to assess strategic fit.
 - Collaborated with R&D and finance teams to translate technical feasibility into business opportunity.
